A decorative graphic on the left side of the slide consisting of two overlapping parallelograms. The front one is blue and the back one is a light green color. They are positioned diagonally, with the blue one in front of the green one.

SignalR - Real Time Communication For The Web

by Johannes

Overview

- Introduction to real-time communication
- What is SignalR?
- Key features of SignalR
- Underlying technologies and protocols
- SignalR architecture
- Use cases
- Demo

Introduction to real-time communication

- immediate updates
- live data
- interactive user experience

What is SignalR?

- framework for building realtime web applications
- simplifies implementation of real-time functionality
- enables scalability, load balancing, user handling and much more

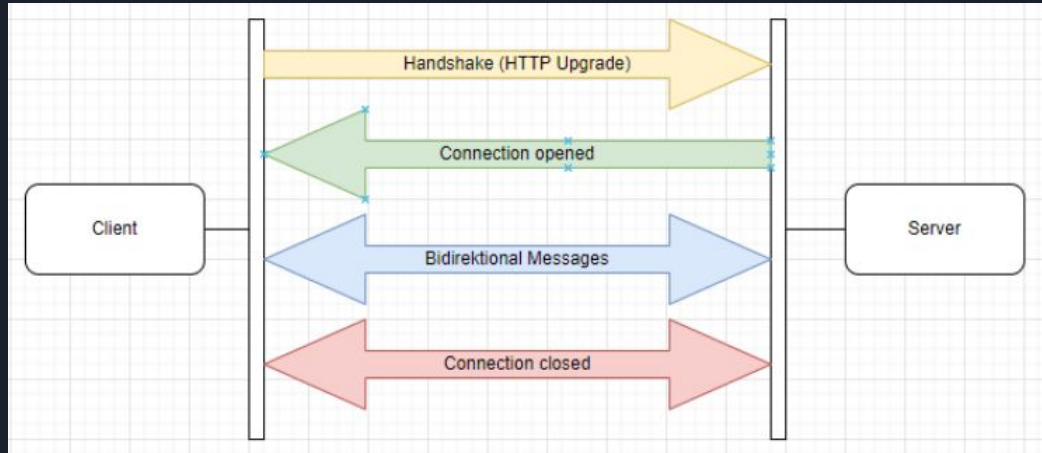

Key features of SignalR

- enables real-time updates and communication between clients and servers
- bi-directional communication
- Scalability
- Cross-platform support

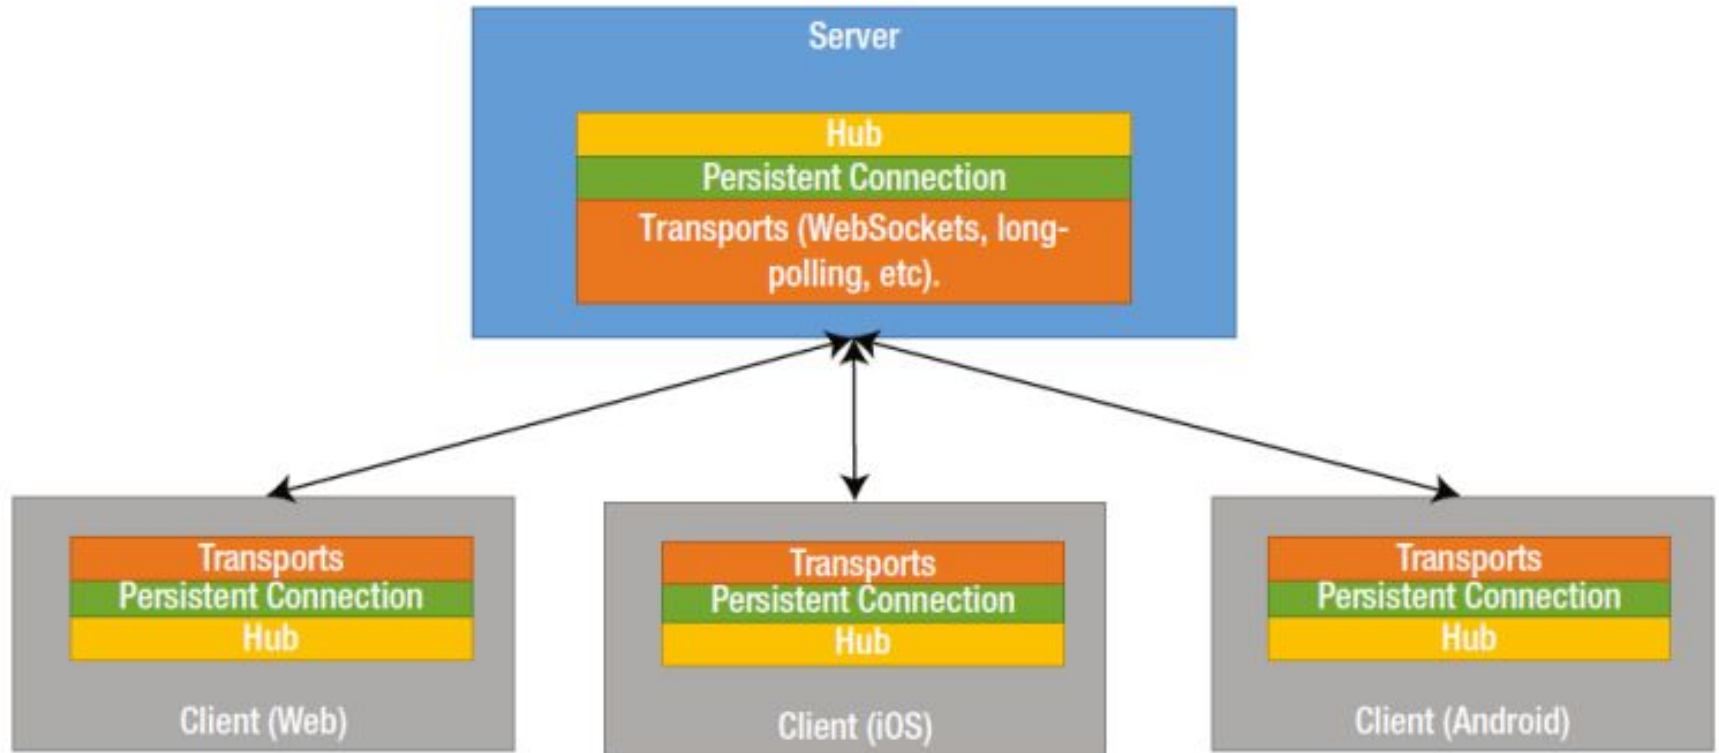

Underlying technologies and protocols

- WebSocket for full duplex communication

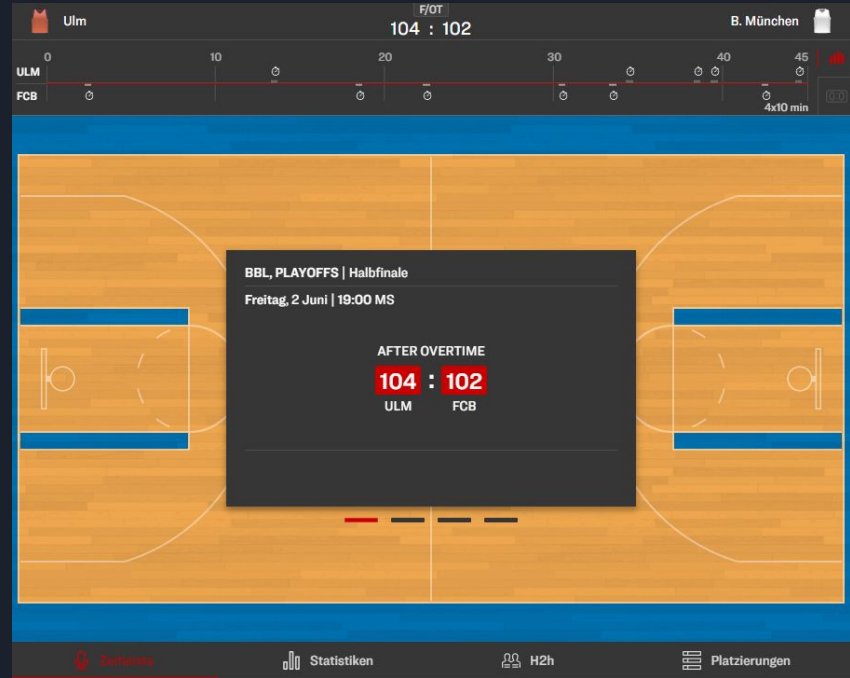

- fallback to Long Polling, Server Sent Events, Forever Frame

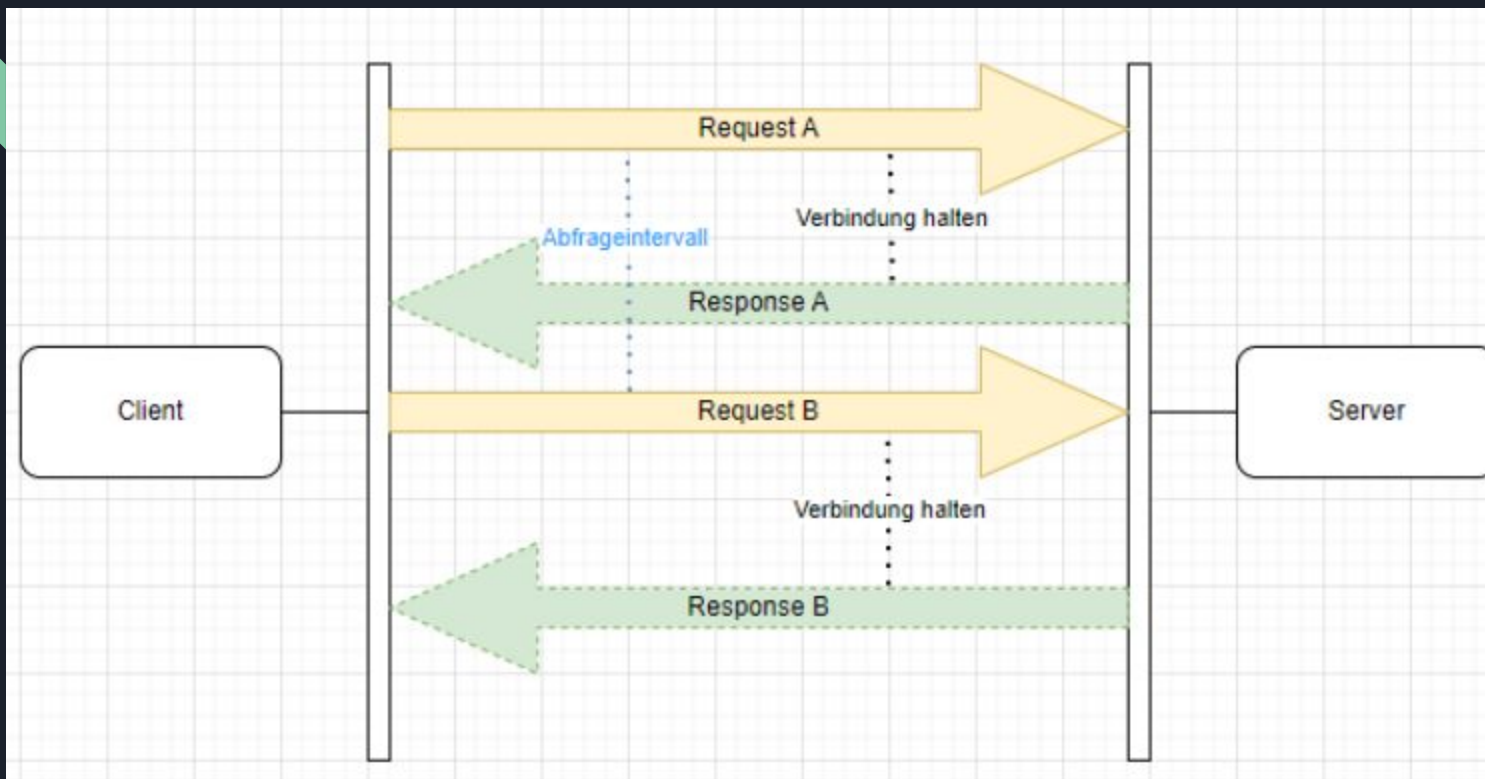

SignalR architecture

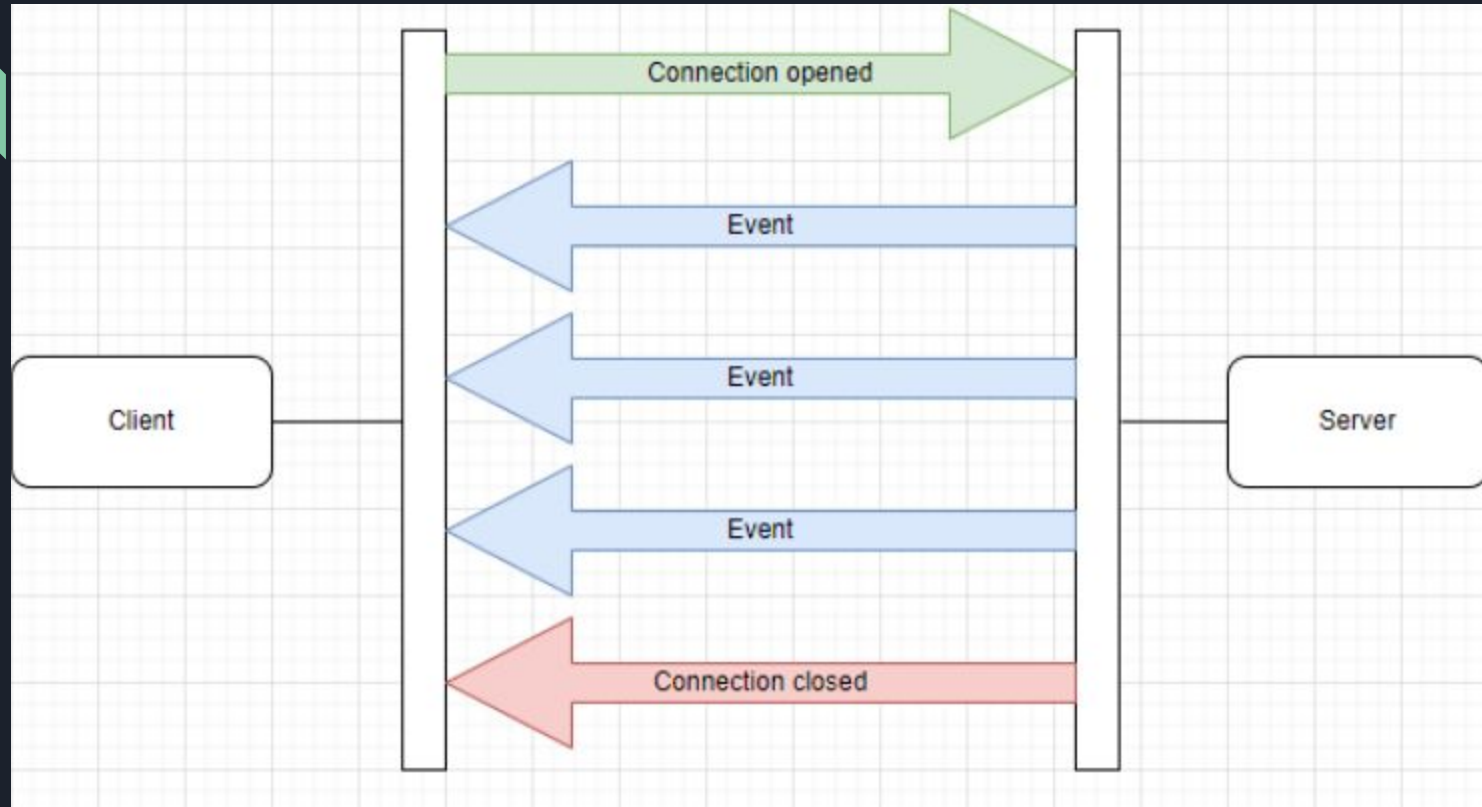

Use Case

- live ticker
- chats
- notifications
- gaming

Demo/Tasks

Thanks for your
attention
